

Treating Different types of Hemorrhoids

Dealing with **hemorrhoids** can be confusing in the beginning. Usually, a person would be ashamed to admit that he/she is experiencing this condition. However, they would want immediate solutions for this and they can easily get it from a doctor's or family's advice. The decision whether or not to be able to reveal it is already hard enough but dealing with the soreness and soreness can be even harder.

Fortunately, the Internet Has All the Answers to These Without Embarrassing Oneself

But frankly, this condition is very common and millions of people around the world are experiencing it too. The cause of this medical condition is not due to shameless works but really as a result of wrong diet. There is no reason why people should be ashamed of it. If people can't really handle the shame, the best way to deal with it is to address it using various methods.

- Changing the diet to a more healthy one can help people stay away from all the pain, troubles and shame brought by treatment plans.
- With this diet, the fiber intake should be increased.
- Fiber will make stools softer for simpler **bowel** movements.
- Whole grains, nuts and beans are all great sources of fiber.
- In addition to this, water intake also needs to be increased.
- The additional fluid in the system will also help prevent constipation.
- Rubber band ligation will be a serious therapy for **internal hemorrhoids**.
- As opposed to the external types, internal swellings are found inside the arschfick location.
- Managing them would require medical help.
- A rubber band ligation is performed by placing a rubber band around the affected blood vessel to stop the blood circulation.
- After Two to seven days, the affected part can now be shed off during bowel movement along with the elastic band.
- The procedure itself can be painful unless anaesthetics are used to numb it.
- This treatment should only be done by doctors and should never be done at home.

Hemorrhoids Will Not Go Away If the Person Will Not Do Anything about Them

And when they get worse and bigger, surgery might be needed to treat them correctly. Surgery is not a cheap treatment and it can also result to certain complications. This condition ought to be treated as soon as symptoms show up. The best time to deal with this would be when the puffiness is still small. In this way, the treatment would work faster in healing the anus region. The early treatment would also give an early and faster remedy.
